Marks	2 Marks

#### QUESTIONS:

Write code and connections in wokwi for the ultrasonic sensor. Whenever the distance is less than 100 cms send an "alert" to the IBM cloud and display in the device recent events

#### CODE:

```

## IBM CLOUD OUTPUT:

The screenshot shows the IBM Cloud IoT Platform interface. At the top, there are tabs for 'Browse', 'Action', 'Device Types', and 'Interfaces'. On the right, there is a blue button labeled 'Add Device' with a plus icon. Below these, there is a navigation bar with tabs for 'Identity', 'Device Information', 'Recent Events', 'State', and 'Logs'. The 'Recent Events' tab is selected. Below the navigation bar, there is a message: 'The recent events listed show the live stream of data that is coming and going from this device.' Below this message is a table with four columns: 'Event', 'Value', 'Format', and 'Last Received'. The table contains four rows of data, all with 'event\_1' in the 'Event' column and 'a few seconds ago' in the 'Last Received' column. The 'Value' column contains JSON strings: '{"distance":7,"Alert":"Distance less than 10"}', '{"distance":9,"Alert":"Distance less than 10"}', '{"distance":8,"Alert":"Distance less than 10"}', and '{"distance":9,"Alert":"Distance less than 10"}'. The 'Format' column contains the value 'json' for all rows.

Event	Value	Format	Last Received
event_1	{"distance":7,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":9,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":8,"Alert":"Distance less than 10"}	json	a few seconds ago
event_1	{"distance":9,"Alert":"Distance less than 10"}	json	a few seconds ago
